Abstract of New Technology

Summary Daily

Daily Summary – Network Scanning Lab

- **Main Points**
  - Basic idea of network scanning and why it is important in cybersecurity.
  - Used tools like Nmap, Netdiscover, and Wireshark during the lab.
  - Scanned the network to find active devices (IP addresses).
  - Checked the open ports on a target machine to see what services are running.
  - Tried different Nmap commands such as fast scan and version scan.
  - Used Wireshark to see the network packets created during the scan.

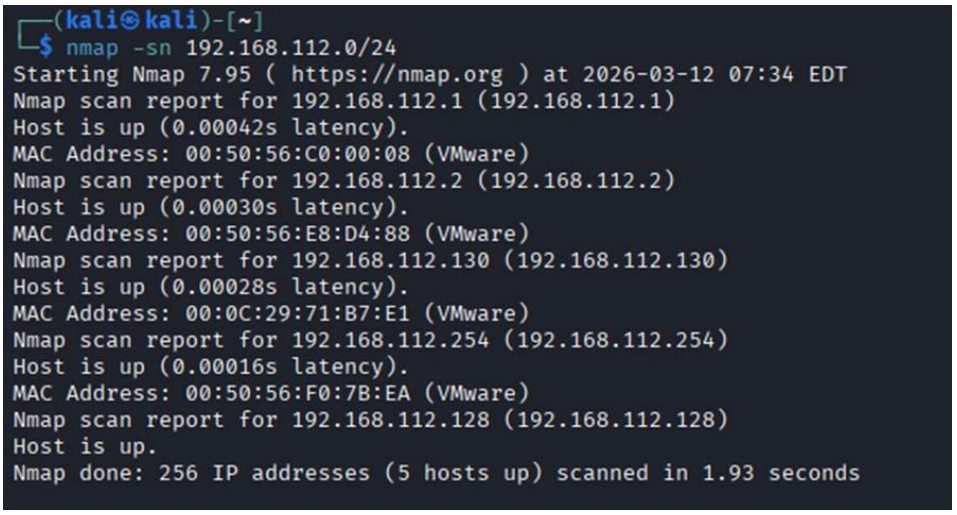

- **Express Your Idea After Learning – What Did I Get From This Lesson?**
  - I learned how to find devices connected to the same network.
  - Understand better how tools can check open ports and services on a computer.
  - It helps me see how security experts collect information about a system before testing it.
  - I learned how to read and understand scan results from Nmap.

- **Future Works – How This Knowledge Can Be Used**
  - These skills can help in finding security problems in a network.
  - It can be used in the future for cybersecurity work and penetration testing.

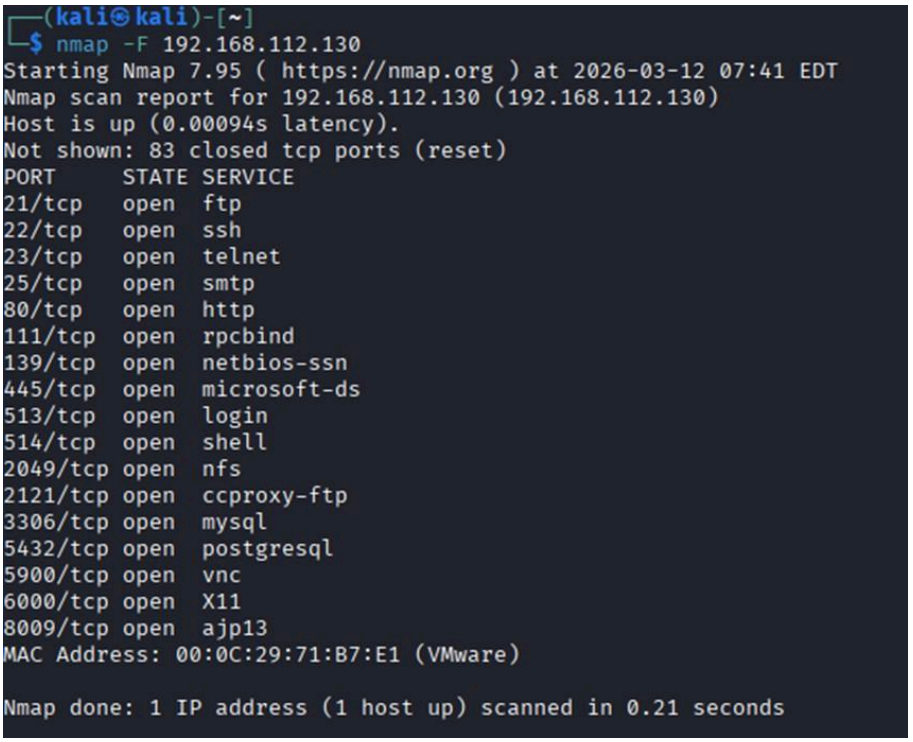

- Knowing how to scan a network helps us protect systems and fix weak points.
- This lesson is a good base for learning more advanced cybersecurity tools and techniques later.

Host Discovery

Fast Port Scan

Scan Specific Ports

```
┌──(kali㉿kali)-[~]
└─$ nmap -p 21,22,80,443,3389 192.168.112.130
Starting Nmap 7.95 ( https://nmap.org ) at 2026-03-12 07:44 EDT
Nmap scan report for 192.168.112.130 (192.168.112.130)
Host is up (0.00030s latency).

PORT     STATE  SERVICE
21/tcp   open   ftp
22/tcp   open   ssh
80/tcp   open   http
443/tcp  closed https
3389/tcp closed ms-wbt-server
MAC Address: 00:0C:29:71:B7:E1 (VMware)

Nmap done: 1 IP address (1 host up) scanned in 0.18 seconds
```

Version Detection

```
└─$ nmap -sV -p 21,22,80,443,3389 192.168.112.130
Starting Nmap 7.95 ( https://nmap.org ) at 2026-03-12 07:48 EDT
Nmap scan report for 192.168.112.130 (192.168.112.130)
Host is up (0.00044s latency).

PORT     STATE  SERVICE       VERSION
21/tcp   open   ftp           vsftpd 2.3.4
22/tcp   open   ssh           OpenSSH 4.7p1 Debian 8ubuntu1 (protocol 2.0)
80/tcp   open   http          Apache httpd 2.2.8 ((Ubuntu) DAV/2)
443/tcp  closed https
3389/tcp closed ms-wbt-server
MAC Address: 00:0C:29:71:B7:E1 (VMware)
Service Info: OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 6.36 seconds
```
