Dear Hiring Manager,

I'm writing to express my enthusiastic interest in the **System Functional QA Officer (ICS06)** position. After reviewing the job description, I realized it describes exactly what I've been doing for the past few years.

As a QA Engineer who has navigated everything from Face Recognition systems to Laundry school apps, I've learned that a system working and a system working correctly are two very different things. My background is a blend of meticulous manual testing and automated precision, with the curiosity to wonder and pushing any system to its limit.

I am certain that I would be a great fit for the opportunity due to certain reasons. I have a knack for studying functional requirements and turning them into detailed test cases that even non-technical stakeholders can understand. From my time at the Digital Economy and Business Committee, I'm used to handling the entire QA lifecycle alone from initial plan to final regression while coordinating across developers, product owners, and the executive level. I also enjoy putting systems under pressure. I'm experienced in creating stress, load, and automated tests using Selenium (Python) and JMeter to ensure things don't break when the real world hits them.

I have also worked on the "**Informal Economy**" system where my main tasks were to procure the application to fit for workers with minor application literacy and ensure the system ran smoothly as it would have thousands of daily traffics. Whether it's native Khmer, advanced English, I pride myself on reporting issues with enough clarity that the fix is halfway done by the time the developer reads it.

Beyond the technicalities, I'm an energetic individual who has a knack for scientific topics. I've survived high-pressure hackathons (even taking 1st runner-up at AWS Build ON).

I would love the opportunity to discuss how my experience in functional, integration, and UAT testing can support your team's goals. Thank you for your time, and I look forward to hearing from you!

My warm regards,

Tek Zanith
